

http.debian.net status update, and its future

Raphael Geissert
Minidebconf Lyon 2015

~~http.debian.net~~ status update

httpredir.debian.org

- One host deployed, a second one in progress
- Under debian.org infrastructure
- geomirror.d.n, mirror.d.n, cdn.d.n: all deprecated in favour of http.debian.net, now httpredir
- Fully-independent IPv6 support

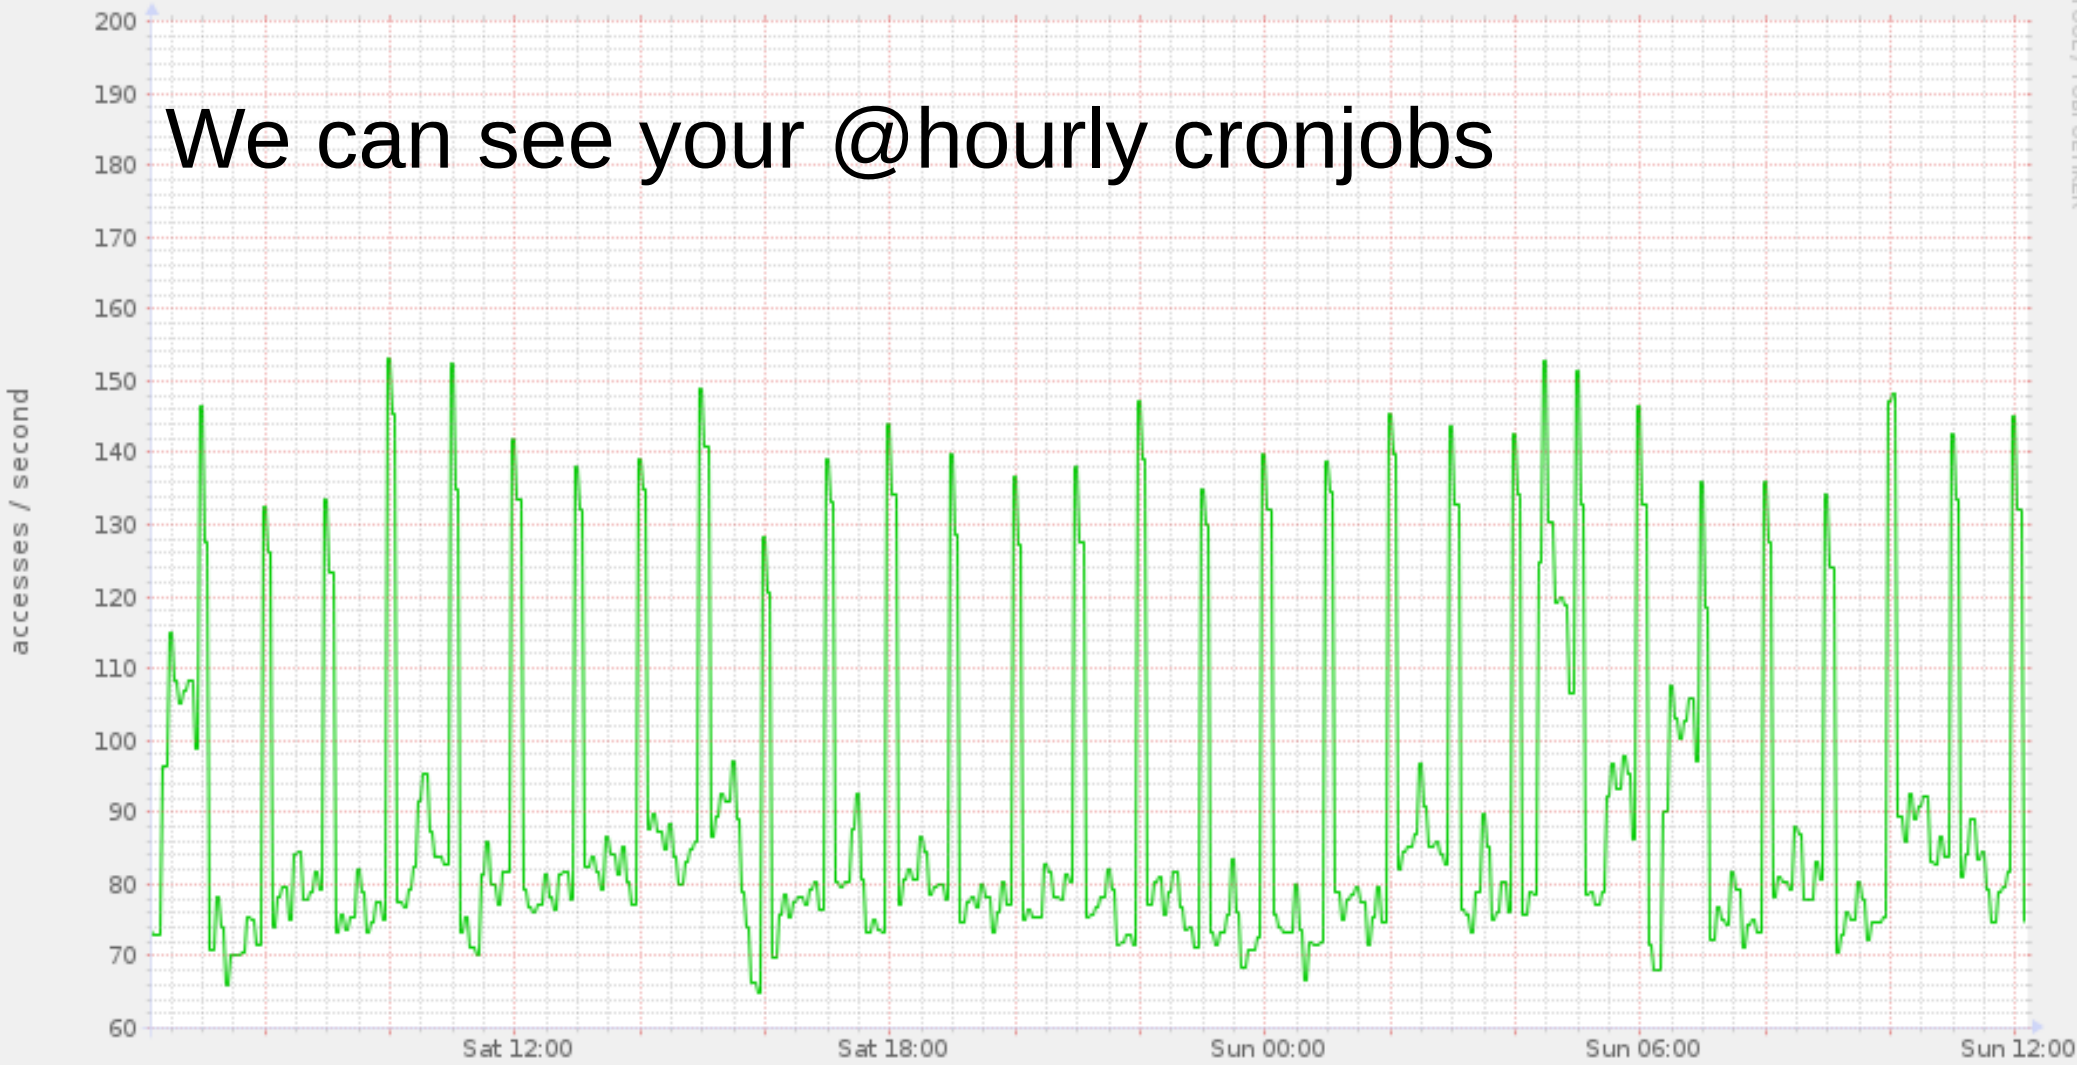

httpredir.debian.org its future

- Deployment of a third host
- geoDNS for the redirector host selection
- Deprecation of http.debian.net
- Service improvements, for better mirror use and less user-visible errors
- Integration of fastly to the pool of mirrors (cloudfront is already there)
- And more

We can see your @hourly cronjobs
