

# JNode 0.2.8

## The Fosdem09 release

Peter Barth

February 8, 2009

# Topics

- 1 Introduction
- 2 Current State
- 3 New stuff in JNode
- 4 Future

# What is JNode?

A Operating System written completely\* in Java

## Mission Statement (website)

Welcome to JNode.org, the website of the Java New Operating System Design Effort. JNode is a simple to use & install Java operating system for personal use. It runs on modern devices. Any Java application will run on it, fast & secure! JNode is open source and uses the LGPL license.

# What is the goal? Who are we?

## goals

- Short term: Server systems (e.g. in virtualized domains)
- Long term: replace Linux

## developers

- Project founder: Ewout Prangma
- Project leader: Levente Santha
- 6 developers (free time developers)

# State of JNode

- Classlib: OpenJDK6 b13
- “Difficult” stuff from GNU Classpath/IcedTea

# State of JNode

- Classlib: OpenJDK6 b13
- “Difficult” stuff from GNU Classpath/IcedTea
- 99,9...% API coverage

# State of JNode

- Classlib: OpenJDK6 b13
- “Difficult” stuff from GNU Classpath/IcedTea
- 99,9...% API coverage
- Many applications are working
  - Jetty
  - Quercus

# State of JNode

- Classlib: OpenJDK6 b13
- “Difficult” stuff from GNU Classpath/IcedTea
- 99,9...% API coverage
- Many applications are working
  - Jetty
  - Quercus
  - Jedit

# State of JNode

- Classlib: OpenJDK6 b13
- “Difficult” stuff from GNU Classpath/IcedTea
- 99,9...% API coverage
- Many applications are working
  - Jetty
  - Quercus
  - Jedit
  - Derby
  - Many many more

# FAQ

- Why??

# FAQ

- Why??
- How can you execute Java code without a VM? How can you write a driver in Java?

# FAQ

- Why??
- How can you execute Java code without a VM? How can you write a driver in Java?
- But you still have a nano kernel, right?

# FAQ

- Why??
- How can you execute Java code without a VM? How can you write a driver in Java?
- But you still have a nano kernel, right?
- Why no POSIX, JNI,..?

# Changes since Fosdem08

## VESA

- Setup by grub
- Simple framebuffer implementation
- No mode-switch
  - Vesa 2.x: real mode :/
  - Vesa 3.x: protected mode 16bit (often buggy)

# Changes since Fosdem08

## Application Packager

- Packages Jars, classfiles,..
- Adds xml descriptors
- Bypasses the security system

⇒ makes it easy to test applications

# Changes since Fosdem08

## Application Packager

- Packages Jars, classfiles, ..
- Adds xml descriptors
- Bypasses the security system

⇒ makes it easy to test applications

## Code Hotswap

- Parts of JDWP (GNU Classpath's version)
- Can be used in eclipse debugger, ..
- Hotswap of kernel code
- No class layout change supported
- Might make troubles for inlined code

# Changes since Fosdem08

## Bjorn Shell

- Aim: bash compatibility
- Script support, shell redirections, pipelines, '&&', '||', ...
- Variable expansions (\$var, \$?,...)
- Completion (try it!!!)
- To be done:
  - Missing features
  - '/dev', '/sys' and '/proc' filesystems
  - Standard variables (\$PWD, \$HOME,...)

# Changes since Fosdem08

## HFS+

- Reading HFS+ works
- Formatter
- Write support in progress
- File system checker missing

# Quality assurance

## Test-server

- Donated by a JNode-Fan
- Running 'test suite' after each commit:
  - Mauve (executing about 10% of the tests)

# Quality assurance

## Test-server

- Donated by a JNode-Fan
- Running 'test suite' after each commit:
  - Mauve (executing about 10% of the tests)
  - JNode specific tests (mostly JIT/VM tests and corner cases)

# Quality assurance

## Test-server

- Donated by a JNode-Fan
- Running 'test suite' after each commit:
  - Mauve (executing about 10% of the tests)
  - JNode specific tests (mostly JIT/VM tests and corner cases)
  - JUnit (many shell and file system tests)

# Quality assurance

## Test-server

- Donated by a JNode-Fan
- Running 'test suite' after each commit:
  - Mauve (executing about 10% of the tests)
  - JNode specific tests (mostly JIT/VM tests and corner cases)
  - JUnit (many shell and file system tests)
  - jtreg (difficult!)

# Quality assurance

## Test-server

- Donated by a JNode-Fan
- Running 'test suite' after each commit:
  - Mauve (executing about 10% of the tests)
  - JNode specific tests (mostly JIT/VM tests and corner cases)
  - JUnit (many shell and file system tests)
  - jtreg (difficult!)
- Diff-tool is missing

# What's next?

## general

- Complete the OpenJDK move
- Extend test-server (especially regression test)
- Finish Isolation
- Bugfixes, speed improvements

# What's next?

## general

- Complete the OpenJDK move
- Extend test-server (especially regression test)
- Finish Isolation
- Bugfixes, speed improvements

## personal

- Complete the Cirrus graphics driver
- Make SMP work (“again”)
- Improve memory management

# Questions

Any Questions?
